Re: I-280, Sections 8A and 8D
Contaminated Materials Disposal Plan
File 76-026

Dear Mr. Fischer:

This Office has reviewed the emergency request of NJDOT for the creation of a second new on-site disposal area, located on Block 285, Lot 2 (west of Diamond Head Oil) for additional quantities of contaminated materials from I-280, Sections 8A and 8D. This new area is designed to contain a maximum of 150,000 cubic yards, providing enough capacity for the revised amounts of contaminated materials to be removed from the roadway areas.

Based upon our review of your request, your request is hereby approved for a temporary period of two weeks or until December 14, 1977, subject to the following conditions:

1. A full set of engineering plans must be filed by December 14, 1977 or this temporary approval will become void. After this Office has reviewed and approved a full set of plans, a full approval will be granted for this operation.
2. Although this Office has been advised by the Town of Kearny's engineer that the Town of Kearny has leased the property for the disposal site to NJDOT, a copy of this lease or other agreement must be provided to this Office.

510386

3. All operations conducted at this site, between now and December 14, shall fully comply with the method described in your letter of November 23, with the following amendments:

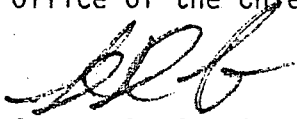

a. A liner of a minimum compacted thickness of 6 inches of sand shall be placed under all materials disposed of in the new area.

b. This liner shall be compacted with a minimum of three passes of a vibratory compactor, conforming to the description on page 82 of the Standard Specifications.

If you have questions, do not hesitate to contact me.

Sincerely,

Office of the Chief Engineer

George D. Cascino, P.E., P.P.
Chief Engineer
